

# ePIC IMOS

**Seeing There is Being There™**

- Standalone: No Computer Required on Site.
- No Software to Load.
- Secure Off-Site Storage of Event Images
- Instant Notification to your Computer, PDA, Mobile Phone or Alarm Control Room.
- Affordable
- Easy to Use

The ePic I.M.O.S. (Intelligent Monitoring & Operating System) is a revolutionary event verification camera system from IMOS Pty Ltd. Simply mount as required, connect to phone line and power and the ePic is ready to go. It truly is Plug and Play!

The ePic utilises the internet to deliver off-site stored images of an event, as well as instant notification to your chosen recipients' mobile phones, PDA's or email. You can also login to our website with your own personal Username and Password to view your images at a later date. Whether overseas, at the office, at home or even while at your holiday house.

# ePIC IMOS

## The Intelligent Monitoring System

The ePic IMOS event verification camera system can be used in the Home or Workplace in a vast variety of applications.

In the Home or Office, it can be attached to an existing alarm system to provide images to verify that an actual break-in has occurred when your alarm system has gone off, not just a false alarm.

It can also be used in conjunction with a Standard Passive Infrared Detector (PIR) if your home or office does not have an alarm system.

The ePic IMOS Camera will then use your phone line and connect to the Internet to send the images of the event to our Secure Website.

The ePic IMOS System will then notify you by Email as well as SMS. You can then Login to the Website to view the images of the event.

These images and notification can also be sent to other people, such as other family members or your existing alarm monitoring control room.
